Publishable summary

This restricted report provides information on the actions taken after the evaluation of testing results of the Open-Bio product database beta version which was developed in December 2015. Feedback was given by product suppliers and public procurement officials. A large part of the feedback and recommendations received could be implemented with the Open-Bio Project, but others were decided to be left as they were or to be handed on to the InnProBio project. After implementation, the database is currently being filled with additional product information from European suppliers of bio-based end-products relevant for public procurement. The final database will be presented at the final project in Brussels on 18 October 2016.
